SimAntz: PHP business apps framework built on top of XOOPS - XOOPS

NEWS_PDF_AUTHOR: Mamba

NEWS_PDF_DATE: 2016/7/28 1:00:00

The newly discovered **SimAntz Framework** is a PHP programming framework built on top of XOOPS 2.4.4, allowing to develop fancy, feature rich, reliable business Apps

https://github.com/XoopsModules25x/simantz

This project focused on providing the developer with a reliable, solid, & visually stunning programming framework. With this framework developers are able to develop great business process management apps based on best programming practices.

This programming framework included:

- Permission control on each windows by user group
- Full audittrail, (control by column)
- Integrated AJAX framework
- Integrated Nitobi's CompleteUI toolkit (powerfull grid, combo box, and etc)
- WYSIWYG (PHPJasperXML) PDF report library integrated
- Supporting multiple organization
- Dynamic workflow integrated
- Build in SMS/Email function
- and many more powerful features

It was built on top of XOOPS 2.4.4 and needs to be updated for the current XOOPS 2.5.8, and potentially XOOPS 2.6.0

The video shows very nicely the most features:

In addition to the original modules contained in the **SimAntz Framework**:

1) SimAntz

Central SimAntz Framework module

2) SimBiz

Pure accounting management system

3) Approval

Approval module

4) BPartner

Business and Reporting Module

we've added extra four modules we've found on SourceForge:

5) SimTrain

This is an web based tuition center management system with features like manage student info, employee/tutor info, tuition class and registration, product & services, payment, generate official receipt, cash onhand, stock.

6) SimSalon

This is salon management system with features like customer info, employee info, vendor info, stock product info, payment, payroll for employee, report (sales analysis,customer and employee)

7) SimInvoice

Business Invoicing System

8) SimFWorker

This is web based project allow user to manage foreign worker data using web browser. It keep basic foreign worker info, medical and visa data, payment history, worker/passport picture and their home town address.

As said above, it was originally built on top of XOOPS 2.4.4 and needs to be updated for the current XOOPS 2.5.8, and potentially XOOPS 2.6.0.

Who would like to help us with that? 🙂

If you're installing it, please note that there are two databases that you could use:

a) in the /database folder

b) in the /simantz/blankdb folder
