

XoopsHeadline 1.11 & Planet XML 2.10 Released for XOOPS 2.5.8 - Modules

NEWS_PDF_AUTHOR: Mamba

NEWS_PDF_DATE: 2016/8/2 0:50:00

The XOOPS Development Team is happy to announce a release of two Feed Readers for RSS and Atom:

XoopsHeadline 1.11 Final and Planet XML 2.10 Final

XoopsHeadline module is used to display RSS feeds on your website. It is typically used to aggregate news feeds into a single location on your website. The headlines can be shown in the XoopsHeadlines module or in a block on your site.

Tutorial: [GitBook](#)

You can contribute to the tutorial, as well as provide translation, on [GitHub XOOPS Docs](#)

XOOPS Planet is a comprehensive PHP version of XML Feed Planet that handles XML feed fetch, parse, display and archive for XOOPS, or "a flexible feed aggregator". It downloads news feeds published by web sites and aggregates their content together into a single combined feed, latest news first, incl. Atom

Key features:

- 1 articles are stored to local database and editable
- 2 Blogs are multiple-categorized
- 3 users can comment, rate blogs/articles
- 4 original author could be notified if his blog/articles are commented or tracked
- 5 users have their Xoops-based bookmars

Tutorial: [GitBook](#)

You can contribute to the tutorial, as well as provide translation, on [GitHub XOOPS Docs](#)

Hopefully in the near future, these two modules will be merged into one. Any volunteers for doing that????? 😊
