MyMenus 1.52 Final for XOOPS 2.5.8+ and PHP 5.5+ (incl. PHP 7) has been released - this release fixes issues with static methods discovered by Goffy.

Thanks to Bleekk and the [XOOPS Germany team](#), we have now "Drag & Drop" incorporated into MyMenus Module.

In the picture above, you can see the links as bars that you can drag around to set the sorting, as well as the sub-links:

Also incorporated are changes from Luciorota, who added an option to use skins from the theme.

As always, it is great to see when developers are working as team and are helping each other! 😊
