

BLogger module for rc3 available - Modules

NEWS_PDF_AUTHOR: CoolPops

NEWS_PDF_DATE: 2003/4/14 9:15:07

I have created a BLogger module for Xoops2_RC3. It is written directly for Xoops and is not another module simply wrapped. Therefore, it takes advantage of every part of Xoops2_RC3 that I know how to. You can download it from: <http://cowgar.com>

The module is still considered beta and I am certian that you will find a minor bug here or there, but I do believe for the most part it is stable. Forty people have downloaded pre-beta copies so far and no one has reported major problems and all the minor ones were corrected quickly.

Current features:

- * Each user can have their own BLog
 - * Interfaces with the search system
 - * Interfaces with the comment system
 - * Interfaces with the notification system
 - * Allows you to use the Xoops editing module
 - * Uses the pagenav controls for navigating BLogs
 - * Provides a global index ordered by create date reversed
 - * Can access an individual person's BLog
 - * Private/Public entries
 - * Interfacing with the block system
 - * Preview before posting
 - * Interfacing with the admin system
- * French language option

Features in the near future:

- * Interface with the user profile module

Features in the distant future:

- * XML-RPC for use with gui blogging programs
- * Syndication?
- * Multiple Languages (any translators out there?)

I hope that this module is of use to someone.
