I just wanted to let XOOPS Gallery users know of a few fixes I added to XOOPS Gallery. The last announcement let everyone know that we now have a random image block. I updated [thread] that block to use SQL instead of traversing the album dirs so, it will be a little more accurate with what it retrieves. I also include a fix posted by ssananik [thread] that clears up the java edit issue. The DL link in XOOPS Downloads will fetch the updated file and I posted a DIFF file here if you want. Lastly, it seems as though XOOPS Gallery and Gallery itself does not operate with safe mode enabled.
