## Bug fix: bad\_user\_name setting in "User Info Settings" - Developer News

Posted by: kanaka

Posted on: : 2003/4/28 18:23:51

The bug is:

In the "User Info Settings", there is a setting named "Enter names that should not be selected as username", but this function doesn't work.

How to fix it:

Edit the file /register.php, go to line 83, and change "bad\_emails" to "bad\_unames".

(You may possibly worry about the Email verification, well, just set your heart at rest, the Email verification code is the lines begin from line 50.)
