I was very pleased to see that someone at phpnuke had developed and integrated paypal system for subscription based nuke sites.

It seems to work well and I have been waiting for someone to create this for a long time. The only problem is that phpnuke is slow and I would really like to use Xoops. Its way faster and much better looking. But, until someone can either create from scratch this feature or port the addon to xoops I am stuck with phpnuke 5.4. Please HELP! Can someone please create this for xoops.

Thanks 😁
