

TheaterMan Public Release - Modules

NEWS_PDF_AUTHOR: Hober

NEWS_PDF_DATE: 2003/8/26 9:14:52

Well, it took me long enough (only about 2 months beyond when I first said it would be done 😁), but here it is. A module for handling a list of scheduled events, such as for a theater or band. It's still in early stages of development, so it's kind of messy when you delete shows and it doesn't actually remove everything, but other than that it works pretty well. Also, it doesn't use mySQL for anything at all...all the data is stored in flat files (like my signature says, mySQL scares me).
